## EXPERIENCE

---

### ASSOCIATE APPLICATIONS ENGINEER

*Oracle / Taguig, Philippines / July 2018 - Present*

- Experienced in designing and developing features of a large utility enterprise product through agile software development from requirements definition to deployment.
- Built an API using Java, Groovy and OUAF for a new utility feature.
- Delivered quality fix of bugs on time that made the customers met their go-live and milestone.
- Design and developed features for the product with minimal to no supervision and release with minimal to no defect.
- Contributed to the development of new features and caused additional customers, re-licensed of the product and generated a million revenue.
- Automated the process of bug patching using Spring Boot.

## PRODUCT & INNOVATION

---

- **Oracle Customer Care and Billing:** A customer information system for utility customers. It includes integration to oracle cloud, batch processing, automatic billing and payments and field services.
- **Oracle Customer to Meter:** A cross-product which is the combination of Oracle Customer Care and Billing, Meter Data Management and Operational Devices Management. Integration of customer information system, meter data management system and smart grid system in one solution.
- **Oracle Patch Portal:** Innovative system that automates the process of bug patching. It reduces the time of manual emails and approvals of Build Managers.
